

FOR IMMEDIATE RELEASE

IMPORTANT NEWS ABOUT THE FUTURE OF ADULT STEM CELL SCIENCE

City: _____

State: _____

date: _____

The Catholic Church has now gone on record, for the very first time, to support the use of adult stem cells to help repair the human body.

In November, the First International Conference on Adult Stem Cells: Science and The Future of Man and Culture was held at Aula Nuova Del Sobodo, The Vatican with some of the world's leading scientists. It brought together many experts in medicine, research, science and religion. One of only two political leaders invited was Stemtech advisor, Ambassador Ray Flynn (former US Ambassador to the Vatican and 10-year Mayor of Boston).

The conference was truly historic because it dealt with one of the most important health and life-saving issues of our generation, the use of adult stem cells to promote health and wellness.

The Church had strongly opposed the use of embryonic stem cells even for research. But this opposition only applied to embryonic stem cells, not to adult stem cells. The Chief Science Officer of Stemtech International, Christian Drapeau, who attended the Conference at the Vatican, and other scientific and medical experts have confirmed that the use of adult stem cells to help heal and "regenerate" the body do not pose any ethical or moral conflicts.

It is believed that this conference will soon be seen as a turning point in the vast health care industry for the simple reason that with the development of adult stem cell research, for the first time in history, we can now begin to talk about truly solving health challenges.

Stemtech has been leading the way in adult stem cell research since 2005. Christian Drapeau and his team of scientists remain at the forefront of this important area of scientific discovery. With the introduction of SE2™ Advanced Adult Stem Cell Support, the Company are poised to capitalize on a field of health care that is quickly gaining more and more attention in scientific circles, in the media and now at the Vatican in Rome.

Get involved. Send a message to your political leaders.

It is time for our political leaders to take this new message directly to the public. This conference should be a strong signal for all political candidates and leaders.

Please contact your national representatives and ask that they learn more about adult stem cell nutrition and the hope it holds for ourselves and future generations. Simply go to www.house.gov/representatives for their names and contact information.
